
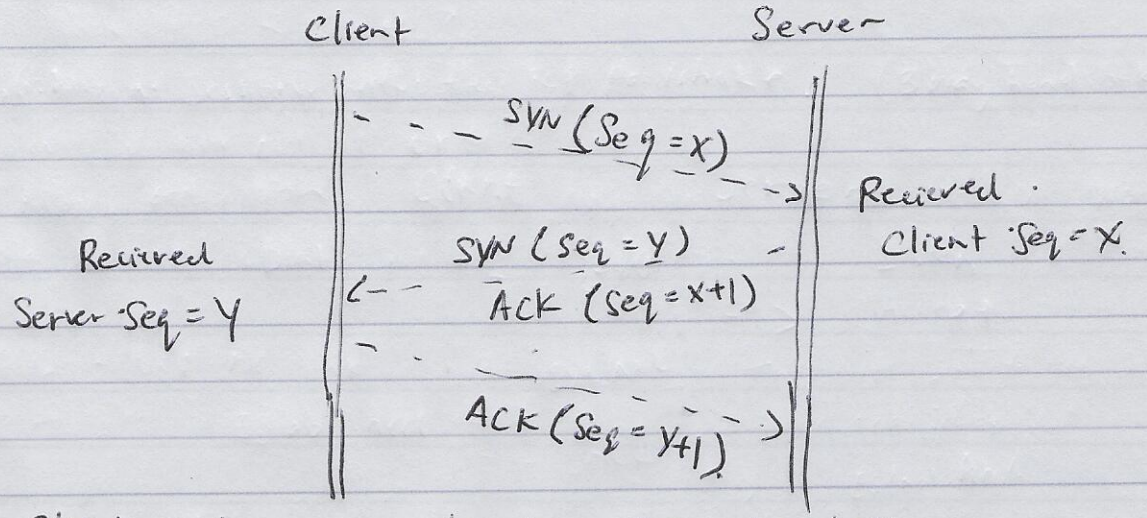
1. Client sends SYN flag to server
   SYN packet informs server of the client capabilities and preferred window setting

2. Server sends packet w/ ACK & SYN flag set.
   SYN Packet contains agreed upon settings.

3. ~~3~~ Client replies w/ an ACK packet, completing the handshake

Acknowledging Receipt of Packets by Using Their Sequence Numbers.



Client and server exchanging sequence numbers.

If sequence number dont match Ack 100 Sender on 101, it lets sender know to retransmit 1 packet
